COLLEGE OF LETTERS AND SCIENCES

The University of Values

Gain a truly liberal arts education while at the same time achieving personal intellectual growth.

National University's College of Letters and Sciences covers the continuum of liberal arts and science education by providing students with programs that are both practical and academically challenging. You can choose from degree programs in arts and humanities, social sciences; professional studies, psychology, and mathematics and natural sciences. Experienced faculty strive to help students attain their professional goals throughout their education life cycle. Whichever major you choose your degree will broaden your world view and help you reach your career and personal objectives. And National's one-course-per-month format, flexible scheduling, and 24/7 support is designed to fit your lifestyle.

WHY LIBERAL ARTS AND SCIENCES?

By developing critical thinking, writing, and analytical skills, liberal arts programs prepare the student to enter and move ahead in many different careers. The combination of practical learning with theoretical study allows students to "learn how to learn" so that their proficiencies stay relevant throughout their lives. Skills highly sought after by employers in a range of industries – communication, creativity, analytical thinking, diplomacy, problem solving, leadership, team building, and appreciation of cultural diversity – are covered in the variety of degree programs offered by the College.

As our society becomes more and more dependent on sophisticated technologies, the need for individuals who can intelligently communicate about them has never been greater. For these advances to be beneficial, people from all walks of life must be able to understand and use them. Adept writers, public relations specialists, and journalists serve as communication liaisons between the high-tech realm and the average user. The College's writing-intensive liberal arts programs allow students to become such practiced communicators.

Psychology has become a sought-after field of study for many. According to the Bureau of Labor Statistics, the need for psychologists and related professionals is expected to grow faster than average for all occupations through 2016. This is due to increased demand for psychological services in schools, hospitals, social service agencies, mental health centers, substance abuse clinics, consulting firms, and private companies. National University offers comprehensive programs for those interested in this growing field.

Students who study lab-intensive science programs take the first step to a lifelong career in discovery. According to the Bureau of Labor Statistics, careers for biologists, researchers, conservation scientists, and foresters continue to grow for all occupations through 2016. These programs put students on the path to becoming life science and earth science teachers as well. National University's bachelor-level science programs also prepare students to enter specialized graduate programs.
